ARC SERVICES

Objective Advisory Services and Oversight
for Technology Integration and Procurement

ADVOCACY

- Independent and objective advisory services for informed decisions related to budgets, total cost, long-term performance and support
- Collaboration with stakeholders to insure functional planning and appropriate system design
- Brand-neutral technology recommendations
- Technology procurement and integration without conflict of interest
- Oversight of system integration and implementation
- Comprehensive system support

ARC Services

System Design and Technology Integration Advisors that Work for You.

In our experience there is often a gap between those who produce technology and those who use it. Unfortunately this gap can result in problematic and complicated technology-based systems that do not meet end-user expectations. Human Circuit bridges that gap, by providing our clients with sound technology planning and brand neutral system design that simplifies the user experience and improves business success.

RESPONSIBILITY

- To understand our client's business environment, culture and objectives
- To recommend the technology that will enhance the work environment and create return on investment
- To understand both immediate investment and total cost of ownership
- To be completely accountable for the integrity of the system(s) design
- To support the recommended technology for both the short and long term

COMMITMENT

- To represent the client first and foremost and to focus on their mission and goals
- To work seamlessly with architectural and project planning and management teams to create efficiencies in time and cost
- To go beyond simple consulting into a model that supports the client from concept through technology lifespan

"Human Circuit works to understand client needs and expectations not to sell the most expensive equipment. If a higher level of technology is requested, value is always the driver. They thoughtfully walk clients through the choices and always suggest what makes sense based on specific requests and workflow requirements. They always have the least disruptive approach when taking on a project and are very professional and creative thinkers."

—Javorka Saracevic - Sr. Project Manager, AtSite

Insight Advisory

Technology-based systems are only smart investments if a viable business perspective - with attention focused on existing workflows, problems, goals and communication challenges - is the driver to support this approach. We begin with a thorough needs analysis and programming phase to create a comprehensive plan for the design and implementation of the project.

Project Management

Complete planning, oversight, and supervision of the project logistics and of integration milestones.

Engineering Oversight

Technical supervision of integration, with complete commissioning, testing, programming and training.

Support Services

Comprehensive and versatile support programs with preventative maintenance, remote monitoring, diagnostics and remediation.

Ancillary Services

While equipment acquisition and integration services can be contracted from third parties directly by the client, Human Circuit can also provide these as additional services upon request.

ARC Services are focused on:

- Architects
- Construction and Project Management Groups
- Project and Property Development Companies

Since 1965, Human Circuit has been dedicated to providing technology planning and design/integration solutions to our clients in need of advanced video, audio, control and IT systems for use in demanding professional environments. With an engineering and IT-centric core, Human Circuit designs and architects intuitive solutions that are aligned with a company's business objectives, anticipated growth and user needs.

Our extensive portfolio includes work for corporations and business enterprises, medical and healthcare facilities, federal, state and local governments, broadcast and television production studios, command and control centers, distance learning and higher education institutions, training facilities, and judicial centers.
